

MICHAEL KAGAN

Chief Technology
Officer, Nvidia

BACKGROUND :

Michael Kagan has served as the Chief Technology Officer (CTO) of Nvidia since May 2020, following the company's acquisition of Mellanox Technologies, which he co-founded. With over 40 years in the tech industry, Michael's career began at Intel, where he contributed to various architectures, including the i860 and Pentium MMX. At Mellanox, he played a pivotal role in developing accelerated networking technologies that enhanced data centre efficiency.

Today, as Nvidia's CTO, Michael is focused on architecting solutions for the evolving demands of artificial intelligence (AI), positioning Nvidia as a leader in AI chip manufacturing. He emphasises the importance of software in conjunction with hardware, advocating for a future where AI computing is accessible across diverse platforms, from data centres to mobile devices.

LEADERSHIP CHARACTERISTIC :

System-Level Visionary

Focuses on scaling performance beyond the limitations of Moore's Law and designs massive systems, including million-GPU clusters.

Network & Interconnect Advocate

Recognizes that network performance is critical for determining AI efficiency. Works to eliminate bottlenecks within AI workloads.

Ecosystem Collaborator

Maintains a philosophy that customer success is NVIDIA's success. Actively enables growth across the entire ecosystem.
